From: markb@wc.novell.com (Mark Burnham)

Hello Folks,

I've been on the ParaNet list for a few months and have really enjoyed reading everyone's postings. I've been quite passive about posting myself basically because I just don't know too much about this stuff!

Anyway, I read Jim's post about a Belgian book coming out and a sort of 'call for translators'. My French is OK (used to be better!) and I wouldn't mind translating some of it for CUFOS. It sounds like really interesting stuff!

Just let me know who I should contact, and I'll see what I can do.

Thanks!

 JD> sincere, and honest (not to mention intelligent) person. I
 JD> really fail to see how a person like this can be making up a pile
 JD> of lies on the subject.
 JD>

Jim:

Please suspend your belief in Mr. Lazar until you've looked at some of the facts..

FACT: Lazar's claims about Element 115, which he says S-4 scientists isolated from materials aboard the saucers, do not stand up to even the most rudimentary inspection.

FACT: Lazar's memory of the details of 115 are so spotty as to be nearly

impossible from a physicist. The first thing a physicist would do is memorize the Atomic weight of any newly-discovered element.

FACT: Lazar claims to have secreted some 115 in his home, yet it has mysteriously disappeared. (If you had some of the most valuable material on Earth, would you hide it in your home? Or would you immediately take out a safety deposit box?)

FACT: Lazar claims to have walked up to Edward Teller, the greatest living nuclear physicist, and simply been handed a job. Not possible.

FACT: Lazar's background does indeed seem a mystery. No school or institution has ever heard of him.

FACT: Lazar provided a W-2 form listing as an employer a non-existent branch of the government, with a non-existent employer ID #.

FACT: Lazar does indeed appear in the Los Alamos phone directory.

FACT: Lazar is known to have been associated with John Lear prior to his coming forward. Lear is a former CIA employee who is known to have spread questionable information for what seem to be disruptive purposes.

FACT: Instead of being a wild-eyed, rabid mega-mouth or a self-proclaimed UFO guru, Lazar is in fact a highly credible-sounding gentleman, almost a boy-next-door type whom anyone would believe in a flash.

I am not by any means telling you to ignore Mr. Lazar. On the contrary, pay extra close attention to him. In him I believe you will see the most blatant evidence for the UFO cover-up. Skeptics always ask, how could the government possibly keep such a thing secret? The answer is that they don't. They realize they can't, so they "hide it in plain sight." Mr. Lazar is, I believe, a false flag, someone who is purposely planted (whether knowingly or not, I don't know) to gain the confidence of ufologists, and who then can be shot down by skeptics who can point to his criminal record (a most convenient contrivance - only the 2nd man in Clark County history to be convicted of pandering), his easily falsified claims, and his lack of provenance. The result is that if someone else were to come forward for real, say, from Tejon Ranch or possibly Kwadjelein, no one is going to believe them. "Oh sure, just like that Lazar guy, right?"

In short, they've got you watching the birdie. Keep your eye on the cat.

Hi Keith,

I haven't had any luck so far with the source of your "angel of revelation" reference. I have posted a response below from Alan Seeger, who is extremely well versed in both the old and new testament, and can find nothing that matches your associate's recollection. I'll let you know if I come up with anything further.

Sheldon

From: ALAN SEEGER *BIBLE ECHO*
  To: SHELDON WERNIKOFF
Subj: RE: BIBLICAL REFERENCE - ANGEL OF REVELATION

Regarding the "angel of revelation" touching the elected three times on the forehead (sorry, no quote facilities available here)
I do not recall any such passage. Checking my Bible concordance program (WordSearch 2.1 NIV) I find no match on a request for "angel," and "three," that comes close to this at all. Sorry.

Subject: Crop Circles
Date: 28 Oct 91 12:24:00 GMT

Hello John,

I think we'll be seeing a great deal of significant new discoveries and innovative research re: the circles effect. In the past few days, I've been contacted by a molecular biologist from the University of Illinois whose expertise is in the area of DNA, protein, and nucleic acid manipulation. He would like to obtain samples of lyophylized CC plant material for analysis. Additionally, a cereal chemist whose specialization lies in the field of electron microscopy, also net-mailed me for samples of the "malformed" seeds Dr. Levengood described. I will do all I can to assist these individuals in acquiring material for their work.

It is encouraging to note that these professionals are coming forward despite all the talk of "hoax", and the potential of ridicule by their peers. Obviously, they feel confident enough in their convictions that there is "something" to the phenomenon, and are willing to take that risk. I maintain my view that they shall be proven to be correct in their beliefs. I don't mean to infer that we're necessarily dealing with UFO's or a "superior intelligence", but I don't think it's the Energizer bunny either, to borrow a hypothesis from Rick Moen.

One beneficial effect that has occurred since Bower and Chorley came on the scene, is that only the "true scientists", and "true believers" seem to remain. The diminished publicity level should actually have a propitious effect on those specialists conducting legitimate exploration. Thanks Doug and Dave!

One writer on another echo queried if anyone has done any Kirlian photography studies on CC plants. Not to my knowledge, but I am examining the possibility. This technique certainly could yield some intriguing results, and possibly provide us with another means of ascertaining authentic formations.

I will continue to do my best to keep you informed on the latest

developments, and appreciate the opportunity to facilitate the
understanding of a most complex and elusive curiosity.

 Thanks,

 Sheldon

Sheldon,
It is really amazing that there are still many physicist who insist that ball lightning cannot exists.

I remember when, many years ago, a guy phoned me (people report all sorts of strange phenomena to a UFO organization) and reported seeing a green ball, about three feet in diamater, forming at the base of an electricity pole in front of a house (on the opposite side of his street) while he was actually watching it. He phoned me a few seconds after the ball appeared and he kept looking through his lounge window and reporting what was happening. The ball was an acquamarine green color and transparent because, he said, he could see the electricity pole and house behind it. The ball was stationary and eventually disappeared after 30 seconds.

If my memory serves me right, there was a short thunderstorm during or before this incident.

Regarding your reply to me about Robert Lazar, I must admit you brought up some good points. Although, I am basically assuming that he must have worked at this secret base he claims, thats all. The fact no one knows about him, and that he 'officially' does not exist could be due to the fact that people in power who don't want him talking simply 'erased' him from computer recordsa here and there. Not a hard thing to do you know.

  Anyways, I don't know what to beleive in these days, you know. We have to beleive something. Of course if you find flaws in Mr. Lazars credibility, you might as well admit, you can find flaws in EVERY PERSON who claims to know any SENSITIVE data regarding this topic. What do you think about William Moore, or John Lear's stories? They are quite astonishing. But I guess if you really try, you can also say the same stuff about them too - they could be working for the government spreading disimformation. Who knows, who knows what the TRUTH REALLY IS...

Subject: Ball Lightning
Date: 1 Nov 91 03:53:00 GMT

 Hi Vlad,

 Thanks for your comments re: the ball lightning observation.
 It's actually quite common for this phenomenon to be seen circa
 power lines, transformers, and utility towers, as your onlooker
 reported. (I'm not saying ball lightning is common, just that it
 has repeatedly been associated with the aforementioned locales.)

 I am also confident that a substantial number of UFO reports
 depicting BOL'S hovering over power lines, are in actuality

misinterpreted ball lightning, or a related event.

Thanks again,

Sheldon

> kind of super-
> luminal pseudo-photon (the infamous tachyon), or what? I
> have heard nothing
> about this research in the normal press (science news,
> scientific american,
> etc.).

This is *very* interesting... Ever heard of Mirkl/Putoff "Scroll
Waves"?

These are hypothetical constructs from the "Zero-Point Energy"
theories. What is interesting is that Dr. Putoff achieved
results similar to the ones you describe from an experiment that

used a chamber similar to the waveguide you described.

While Zero-Point Energy is really primarily concerned with extracting energy from near vacuum conditions (and things like the van der Waals forces & the Casimir effect), photon augmentation is another aspect of the theory. There's a rather lengthy text file available at KeelyNet, Tom Albion's THC Online BBS in Canada, and my BBS on low-energy ZPE phenomena & on photon augmentation. File name is ZPE5.ZIP.

You might find the whole ZPE series interesting, actually.

Best,
Clark

PS -- Here's a sample:

[much stuff cut...]

> A vacuum between two sheets of metal is not the same as one that is unconstrained. Some of the modes of the electromagnetic field are suppressed--the modes which represent waves in the field that are too big to fit into the cavity.
>
> By changing the size of the cavity, you can lose certain modes. Groups of scientists around the world have built cavities that rule out certain modes of vacuum energy, and thus stop atoms from emitting photons at various wavelengths.
>
> Using a related technique, they have designed and built cavities that enhance the radiation by allowing the atom to "see" more modes of the vacuum radiation than it would if there was no cavity.
>
> The results of such experiments allow scientists to explore otherwise inaccessible areas of quantum electrodynamics, the theory of electromagnetic fields.
>
> An intriguing theoretical point about the way that atoms interact with vacuum has been made by Dr Hal Puthoff of the Institute for Advanced Studies in Austin, Texas.
>
> For every atom there is an energy level below which the electrons cannot sink. Dr Puthoff suggests that this is because, at the low energy levels, electrons cannot lose energy any faster than they pick it up from a vacuum.
>
> It is the vacuum energy that buoys them up, stopping them from losing all their energy and collapsing into the atomic nucleus.
>
> That means that the vacuum underpins the stability of every atom--and thus of almost all matter in the universe.
